#### IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

e Patent Application of:

Paul Lawheed

Docket:

8639

Serial No.: 10/616,200

Art Unit:

Filed:

9 July 2003

Examiner:

For:

IMPROVED FLAT PLATE PANEL SOLAR

**ELECTRIC GENERATORS AND METHODS** 

# RELATED ART/INFORMATION DISCLOSURE STATEMENT

Commissioner of Patents P.O. Box 1450 Alexandria, VA 22313-1450

Sir:

Enclosed are the PTO 1449 and 892 Forms from the parent applications together with an additional Form 1449, constituting the applicant's Related Art/Information Disclosure Statement.

Respectfully submitted,

Attorney for Applicant

602 East 300 South Salt Lake City, UT 84102 (801) 364-5633

> I hereby certify that this correspondence is being deposited with the United States Postal Service as first class mail in an envelope addressed to: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450 on August 22, 2003.

### RELATED ART/INFORMATION DISCLOSURE STATEMENT

Honorable Commissioner of Patents and Trademarks Washington, D.C. 20231

Sir:

The Applicant does not believe that the related art set forth on the accompanying PTO-1449 forms is particularly germane and certainly such does not anticipate or make obvious the invention of the above-identified application.

To the best of the recollection of the Applicant and the undersigned, neither is aware of any further patent or publication which might be deemed relevant to the claimed subject matter.

Furthermore, it should also be made of record that no exhaustive effort has been undertaken to locate, either on the part of the Applicant or the undersigned, any patent or publication which might in the past have been familiar to the Applicant or the undersigned and which may be contained in the files and/or among records concerning which neither the Applicant nor the undersigned has present recollection.

I hereby certify that this correspondence is being deposited with the United States Postal Service as first class mail in an envelope addressed to: Commissioner of Patents and Trademarks, Washington, D.C. 2023 you tune 29, 2001

Lynn G. Flyster

Restated, so far as the undersigned and the Applicant is able to presently recall, neither is aware of any related art patents or publications believed to be germane in any way to the above-identified application other than the patents mentioned below and said patents are believed to be only of general interest.

Solar energy is freely and daily available. It is a clean, non-polluting source of energy. Providing a reliable, long term, cost effective, efficient way of using sunlight to obtain electrical and thermal power has long been an unsolved problem, until the present invention.

It has been proposed that flat panel solar converters be used to convert direct sunlight into thermal or electrical energy.

Pedestal supported flat panels using direct sunlight to generate electricity were part of the Solar One project.

A circular, but concave reflector mounted on a single column or pedestal has been proposed.

This approach was used on the Soleras water desalination project in Saudi Arabia and on the Solar

Two project in Dagget, California.

Fixed position concave reflectors placed in an array and positioned in side by side rows on an incline have ben proposed. See U.S. Patent No. 4,202,322. Such an installation was made at the Federal Correctional Institution at Phoenix, Arizona.

Tiltable elongated concave reflector assemblies have been utilized, such as the one at Barstow, California, owned by FPL Energy SEGS VIII and IX.

Solar facilities, using a different technology, also exist at the Glendale Airport in Arizona and at the Plataform Solar Americas project in Spain.

Solar Systems comprising bidirectionally controlled Fresnel lens and solar cell assemblies, utilizing direct sunlight, have been proposed. See, U.S. Patent No. 4,649,899, for example. Also

see, U.S. Patent No. 4,245,153. Optical detectors for dual axis tracking of the sun are known. Even

less relevant are U.S. 4,439,020 and 4,238,246.

The above-identified proposals and installations have failed to provide reliable, low cost,

efficient, variable capacity systems by which solar energy is converted to thermal and/or electrical

energy. A long felt need has existed for energy conversion plants which are reliable, efficient, cost

effective and size variable to meet both low and high capacity demands for thermal and electrical

energy.

While the Applicant and the undersigned attorney believe PTO-1449 patents, publications

and prior solar installations are of general interest only, it is respectfully requested the Examiner

make his or her own independent search and review to determine for himself or herself the extent

to which the cited publications and patents and any others located in the search by the Examiner, as

· well as the prior solar installations, are deemed to be relevant, if at all, to the presently claimed

invention of the above-identified application.

Respectfully submitted

Attorney for Applicant
